**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

- All outdoor applications must be limited to spot or Crack & Crevice® treatments only, except for the following permitted uses:
  1. Treatment to soil or vegetation around structures;
  2. Applications to lawns, turf and other vegetation;
  3. Applications to vegetation of height 3 ft. and over.

- Other than to applications building foundations, all outdoor applications to impervious surfaces such as sidewalks, driveways, patios, porches and structural surfaces (such as windows, doors and eves) are limited to spot and Crack & Crevice applications only.

- Do not apply directly to sewers or drains, or to any area like a gutter where drainage to sewers, storm drains, water bodies or aquatic habitat can occur, except as directed by this label.

**GENERAL INFORMATION**

This product is a flammable microencapsulated concentrate containing 0.5 lb of cyfluthrin per gallon. It may be used on any surface which will not be damaged or stained by water. Heavy applications may leave a visible deposit. On some surfaces this deposit can be removed with a damp cloth or sponge. In situations where conventional application methods have not or are not likely to provide adequate coverage, foam generating equipment or similar machines can be used to provide a continuous coverage. Use a foam that foam outside walls to avoid any water damage or electrical short circuits. Refer to section entitled "Foam Application Use Directions".

- The higher rate should be used for cracks, for longitudinal control or for high insect infestations.

**VOID/CRACK & CREvice® APPLICATION**

To treat insect harbored in voids and in cracks and crevices, apply with equipment designed for void applications. Follow the manufac-
turer’s recommendations for proper equipment set up and operating pressures. Place the tip of the applicator or air into the crack or crevice to be treated. Apply product in short bursts while keeping tip in position. Allow the air stream to push insecticide deep into voids. Application should be made in such a manner to limit dripping and flowing of insecticide from cracks and crevices.

**INDOOR TREATMENTS**

Dilute to 0.05% or 0.10%, with water, using the spray dilution chart. Use as a Crack & Crevice or spot treatment where insects may be hiding, living and breathing and/or for selected spot application. When using in food/feed areas of food/feed handling establishments; restaurants or other areas where food/feed is commercially processed, refer to the section entitled “Food/Feed Areas of Food Handling Establishments” for use directions. Non-food/feed areas are areas such as garbage rooms, rooms, floor drains (to sewers), entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage (after canning or bottling).

**FOOD/FEED AREAS OF FOOD/FEED HANDLING ESTABLISHMENTS**

Applications are permitted in food/feed areas of food/feed handling establishments as a General Surface Treatment. Food/Feed handling establishments are defined as those establishments associated with the processing, preparation, cooking, handling, and serving of food and feed.

**NOTICE** This specimen label is for informational purposes only. All uses may not be approved in all states. See labeling which accompanied product for Directions for Use or call 800-777-8570 for more information.
as places other than private residences in which exposed food/feed is kept or served. Food/feed areas include areas used for receiving, storing, packing (boxing, wrapping, bagging, preparing, edible waste storage and enclosed processing systems (including all machinery, equipment and utensils). Success, where food is exposed and the facility is in operation, are also considered food areas.

GENERAL SURFACE APPLICATION: Do not apply as a general surface application to other than food/feed areas. For information on the handling area of the facility to which this product is to be applied, not to exceed 10% of the total area. This product may be applied to floors, walls, and ceilings where no food is processed or held and where no articles of food materials are stored. Do not apply directly to food products. Cover or remove all food products and processing equipment and thoroughly rinse with clean, fresh water. Do not apply on floors, cracks, crevices and/or voids where these insects may be harboring or hibernating. Infested areas included, but are not limited to, cracks and crevices in weep holes, windows, sill plates, around vent stacks and door frames, and under siding. Treat wall area around entry points on exterior where insects congregate. Repeat application as necessary, but not more than twice per week. Treatments must be at least 3 days apart. CARPET ANTS: Make spot and/or Crack & Crevice applications to any walls, inside or outside around doors and windows, and other areas where insects are present. Areas which are not treated include, but are not limited to, attics, crawl spaces, ceilings, garages, soffits, wall voids, weep holes, and other void areas. Where possible, clean under the wood directly. Repeat applications as necessary, but not more than twice per week. Treatments must be at least 3 days apart.

BEES, WASPS AND YELLOWJACKETS: As a preventative or remedial treatment to help prevent these insects from building nests or workers from congegating on structures, follow perimeter treatment directions under outdoor section of label. Inadequate attention to soffit and eave areas. For treatment of a yellowjacket or wasp nest, liberally treat the nest inside the nest for yellowjackets and the surrounding area. For treat- ments inside nest walls inside the nest in the most sufficient quantity to prevent further growth. More than one point of application may be required. Most applications should require no more than 1/2 gal of diluted materials. Pay particular attention to the areas which can be treated and run-off should be avoided. This type of application is intended to be a supplemental treatment for control of drywood and above ground termite nests. This product should be used in sufficient water to increase the total moisture content. Use the 0.05% or 0.10% rate. TERMINITS: To inhibit termite infestations, treat exposed tunneling cracks or cold junctions in concrete or other structural interfaces. Treatments under exposed surfaces should be covered thoroughly but excess run-off should be avoided. This type of application is intended to be a supplement with other residual treatment of drywood and above ground termite nests. This product should be used in sufficient water to increase the total moisture content. Use the 0.05% or 0.10% rate. CAUTION: Contains a pesticide which is inherently associated with use of this product, and therefore all such incidental, special or indirect damages resulting from such use shall be assumed by the buyer. Whittine warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the label and the inherent risks, referred to above. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW: (A) WHITTINE MAKES NO OTHER WARRANTIES EXPRESSED OR IMPLIED, INCLUDING ANY WARRANTIES OF MERCHANTABILITY FOR PARTICULAR PURPOSE OR MERCHANTABILITY, AND SELLER DISCLAIMS ALL LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO RECOVERY OF THE PURCHASE PRICE OF THE PRODUCT, AND (B) WHITTINE AND SELLER DISCLAIM ALL INCIDENTAL, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT. Whittine and the seller disclaim all warranties, express or implied, in connection with these Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of Whittine.
